MP3 PLAYER APP

[Listen article](#)

Welcome to our Simple MP3 Player! What? You are looking for a wav player? No worries, we got you covered! The Simple MP3 Player supports multiple audio file formats, such as mp3, aiff, caf, mp4, mp2, mp1, aac, au, m4r, and, of course, the wav file format!

What is an MP3 player like this capable of? It looks and functions a lot like a hand-held MP3 player, but on your computer screen. It lets you play your own audio files, such as, say, wav sound effects or a voice diary, on your computer. And it's really easy to use!

The app design features familiar buttons: Play, Pause, Rewind, Fast-forward. Our MP3 player app also lets you adjust the volume and use a scroll bar to skip to the exact spot in the track you need. It shows you the list of your audio files, and you can add to that list any time. It displays the title of the track currently playing.

And here is something else this MP3 player app can do that your hand-held player can't: you can Clone the player and create a whole new playlist for the player #2! Then, you can use the players either together or separately., for example, you can play voice notes on player #1 and music on player #2.

All you need to do is Drag & Drop your MP3, or MP4 files (see the list of supported file formats above) into the app, select a play mode (In order, Loop or Shuffle) and hit Play! Download it today!

Check out our Introduction slides for more information. And don't forget to watch our video tutorial on YouTube!
