**The Repeat mode
will help you
tune each string
without taking
your hands
off your violin**

TUNE YOUR VIOLIN FAST AND PRECISELY!

[Listen article.](#)

A simple and powerful tuner will help you with this!

Not only can you listen to the realistic sound of every violin string you tune, but you can also check the correctness of every tuning and bring it to perfection with the help of the chromatic tuner, which can be found inside the application's window!

In order to start the violin tuning, choose the most suitable timbre from 11 available alternatives in the list.

Four buttons in the lower part of the application's window comply with the four strings of the violin.

Every button will play a sound of a perfectly tuned string of the musical instrument.

If you want to simplify the tuning process, use the Repeat Mode.

This will allow you to tune your violin without the need to take your hands off it.

The chromatic tuner in the middle of the application window will automatically check how the string you are working with is tuned.

You can also use it for the fine violin string tuning.

If the string is perfectly tuned, its green light indicator will be turned on.

If the red light indicator is on, you need to keep tuning.

The application will give you hints during the tuning process; if you see the red arrow pointing to the right, that means that the string is too loose.

If it is pointing to the left, then the string is too tight.

Keep tuning the string until you see the green indicator, then move to another string, and so on, until your violin will not be perfectly tuned.

And now enjoy playing the violin!

App's functions:

*Chromatic tuner with audio input and microphone support,

*Tone generator with the original violin sounds,

*Automatic repeat mode of the played sounds,

*11 timbres:

+Baroque,

+Science,

+France 1859,

+New philharmonic,

+Concert,

+Boston symphonic,

+New Berlin,

+Moscow Theatrical,

+Old Berlin Philharmonic,

+Old philharmonic,

+Renaissance.
